

AV Requirements

SOUND: Wireless lavalier. It is preferred that this is not the same microphone that the introducer will be using. Lcd projector appropriate for room and audience size with screen. Generations in Change requires a sound jack to the room sound system that plugs into Phil's PC.

STAGING: A riser/stage approximately 8'x12' or larger as close to the audience as possible for groups over 100. A lectern is not needed. If a lectern is being used for other presentations, please position it at least four feet from the front edge of the "stage." Phil will work in front of the lectern.

LIGHTING

Lighting is important. Please make sure Phil has a well lit "performance area." Most meeting rooms (and their existing lighting) are fine. Please make sure there is no glare on the screen by a light directly overhead. Please contact Phil for any questions about room set-up, staging, etc. We look forward to working with you!
